

HRASNICA IGMAN FURNICULAR (CABLE RAILWAY)

Project title	Construction of cable railway (funicular) between Hrasnica and Igman
Sector	Infrastructure
Location	Settlement Hrasnica – Mountain Igman
Location description	This location has versatile and morphologically uneven terrain where highland area precedes. From geomorphology aspect this location is adequate for funicular construction especially in hillside parts where inclination goes from 5% to 30%. Proposed location for Hrasnica – Igman funicular is mostly in the area of oak and hornbeam zone. Because of its vegetation variety, this location is interesting in all four seasons of the year. Traffic connection to the beginning station is by Ilidža – Hrasnica road that is already built. Power supply should be 10 kW cable connected to exiting power network. Natural characteristics and nearness of Olympic centers Bjelašnica and Igman, and the city, gives relevant development potentials to this area and also the possibility for improvement of exiting economy network and tourism as main economy branch with possibility of using available capacity in summer and in winter period in the way that will not degrade natural ambient. This is the basis for the planning of this funicular that would be followed by versatile facilities for active and passive sport activities.
Project background	Municipality of Ilidza is local self government and acts by the rights and obligations assigned to it by the constitution, law and statute. It handles local inhabitant's needs, urban and housing policy, manages municipal assets, provides municipal services, deals with administration affairs and other local affairs. It handles all local affairs that are not excluded from its jurisdiction and not assigned to jurisdiction of other level government. Municipality is composed of dozen of services that handle various fields of work. Municipal bodies are municipal mayor that represents executive power and municipal council that represents deciding body in municipality. Municipal mayor and council are elected according to the Election law.
Project status	Idea concept and idea project.
Project description	Difficult traffic communication to the Olympic mountains and the need for faster and more economical mass transfer to these mountains were the main reasons for Hrasnica - Igman funicular idea. Planning guidelines defined the length of this funicular of 6 223 m with start station near sport and recreation center in Hrasnica

	(Famos football stadium) and end station on the plateau in front of Igman Hotel. It also defines one middle station on the third kilometer of the route. This funicular would be equipped with gondolas – cabins with eight seats.	
Estimated total investment cost	AROUND 30 million EUR Total investment costs will be defined when the feasibility study is completed (Already invested around 250,000.00 EUR)	
Inputs required from foreign partner	**Value**	**Description**
		Direct investment
Form of cooperation with foreign partner	**Financial**	**Technical**
	Concession
